***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 13, 2003 has been entered.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 22,42-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Manwaring et al in view of Wilk et al (WO 93/15648). Manwaring et al discloses an apparatus which includes a surgical tool and means for determining the actual position of the distal end of the tool relative to a desired position of the tool. Manwaring et al further provides a display for indicating such differences in position. The display includes a plurality of indicators. Reference numeral 46 represents the plurality of indicators which provide an indication to a human operator of a direction in which the tool should be moved to reach a desired position. Wilk et al disclose a surgical tool having a display on the tool. It would have been obvious to one skilled in the art to have modified Manwaring et al such that the display is mounted on the tool in order to provide a more compact system. The power source of the system would provide a means for activating the indicating means and the use of the modified system would result in the performance of the claimed method.
